PROFESSIONAL SUMMARY

Java Full Stack Developer with 4+ years of experience building end-to-end applications using Java, Spring Boot, Hibernate, PostgreSQL, and React.js. Skilled in designing RESTful APIs, implementing JWT-based authentication, and delivering responsive, production-ready frontends integrated with secure backend services. Experienced with containerized deployments using Docker and Kubernetes, and currently building a full-stack personal platform with Kafka, Redis, and WebSockets. Strong foundation in clean architecture, API design, and Agile delivery, with a track record of solving production issues and improving system performance across the full stack.

TECHNICAL SKILLS

Languages: Java 8, Java 11, JavaScript (ES6+), SQL

Core Java: OOP, Collections Framework, Exception Handling, Multithreading & Concurrency, Streams, Lambda Expressions, Functional Interfaces, Generics, JDBC, Data Structures & Algorithms

Backend & APIs: Spring Boot, Spring MVC, Spring Framework, Spring Security, Spring Data JPA, Hibernate/JPA, RESTful API Design, Microservices Architecture, Spring Cloud Gateway, Eureka Service Discovery, Apache Kafka, WebSocket/STOMP

Frontend: React.js, React Hooks, React Router, Axios, HTML5, CSS3

Security: JWT Authentication, Role-Based Access Control (RBAC), Spring Security Filter Chain, Secure Coding Practices

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Data Modeling, Query Optimization, Indexing, Joins, Stored Procedures

Build & Version Control: Maven, Git, GitHub, GitLab, GitHub Actions (CI/CD)

Containers & Cloud: Docker, Docker Compose, Kubernetes, AWS S3, AWS EC2, AWS RDS

API Tools & Documentation: Postman, Swagger/OpenAPI, API Testing

Logging & Monitoring: SLF4J, Logback, Spring Boot Actuator

Architecture: Layered Architecture, Design Patterns, Object-Oriented Design, API Gateway Pattern

Methodologies: Agile, Scrum, Code Reviews, Technical Documentation, SDLC

WORK EXPERIENCE

Software Engineer, Java Backend Developer — CMS Computers Ltd., Bengaluru May 2023 – Present

- Designed, developed, and maintained 20+ RESTful APIs using Java, Spring Boot, Hibernate/JPA, and PostgreSQL across 5+ enterprise business modules supporting core operations for internal business teams.
- Developed and enhanced 15+ React.js components, integrated REST APIs using Axios, and implemented frontend validations, improving data entry accuracy across enterprise application modules.
- Built secure authentication and authorization layers using Spring Security, JWT, and Role-Based Access Control (RBAC), securing access for 100+ internal users across enterprise applications.
- Optimized PostgreSQL queries and indexing strategies, reducing average API response time by an estimated 20-25% and improving overall backend performance.
- Standardized validation, exception handling, and API response structures across services, reducing production-level defects by an estimated 15-20% and improving application reliability.
- Diagnosed and resolved production issues and performance bottlenecks, minimizing downtime and reducing recurring incident tickets by an estimated 30%.
- Containerized applications using Docker and Docker Compose, reducing new environment setup time for developers by an estimated 40%.
- Collaborated with product owners, QA teams, and frontend developers in Agile/Scrum environments, contributing to on-time delivery across 15+ sprint cycles.
- Authored technical documentation and API specifications for 20+ endpoints using Swagger/OpenAPI, streamlining onboarding for new team members.

- Participated in code reviews, sprint planning, estimation, and release activities following clean code and software engineering best practices.

Java Full Stack Software Engineering — Postgraduate Program — StackRoute (NIIT) June 2022 – May 2023

- Completed a full-time, intensive industry-oriented program covering Java 8+, Spring Boot, Hibernate, REST APIs, Microservices, React.js, and enterprise database management, bridging directly into a full-time backend engineering role.
- Built and deployed multiple capstone projects applying Spring Boot, Hibernate/JPA, PostgreSQL, and React.js in simulated enterprise scenarios.

Junior Java Developer — OneIT Custom Business Software, Remote May 2021 – May 2022

- Built and maintained 10+ backend APIs using Java, Spring Boot, Spring MVC, and Hibernate for enterprise web applications.
- Implemented business logic, validation, and exception handling following layered architecture, reducing recurring bug reports by an estimated 20%.
- Designed entity relationships and performed database operations using Hibernate/JPA with MySQL/PostgreSQL across 5+ core modules.
- Collaborated with senior developers and QA teams to troubleshoot and resolve 50+ production defects, improving application stability.
- Integrated backend services with frontend applications through RESTful web services, supporting end-to-end functionality across 3+ enterprise modules.
- Engaged in Agile ceremonies including sprint planning, daily stand-ups, code reviews, and testing activities.

KEY PROJECTS

DevPulse — Developer Task & Notification Platform (Personal Project)

Java 17, Spring Boot 3, PostgreSQL, Redis, Kafka, WebSocket/STOMP, Spring Security (JWT), React.js, Docker, GitHub Actions

- Building a full-stack developer productivity platform with real-time notifications via WebSocket/STOMP and asynchronous event processing using Apache Kafka.
- Implementing JWT-based authentication and Spring Security filter chains, with Redis for caching and session management.
- Setting up CI/CD pipeline using GitHub Actions and containerizing services with Docker for consistent deployment.

ADVANN — E-commerce Microservices Backend (Personal Project)

Java 8+, Spring Boot, Spring Security, Hibernate/JPA, PostgreSQL, JWT, Docker, Maven, Spring Cloud Gateway, Eureka, Swagger/OpenAPI

- Architected a production-grade microservices backend spanning 5+ independently deployable services, with centralized API Gateway (Spring Cloud Gateway) and Eureka Service Discovery for dynamic routing.
- Enforced enterprise-grade security using JWT authentication and RBAC via Spring Security Filter Chain, with standardized ApiResponse<T> structure, global exception handling, and Bean Validation.
- Packaged the full application stack into Docker containers, with Maven builds and Swagger/OpenAPI documentation.

CMS Digital Lifecycle (CDL) — Internal Enterprise Product

Java 8, Spring Boot, Hibernate/JPA, REST APIs, PostgreSQL, MongoDB, React.js, Docker, Maven, Git

- Built scalable backend modules using Spring Boot and Hibernate/JPA with layered architecture; designed 10+ REST endpoints consumed by React.js frontends with full CRUD, validation, and exception handling.
- Tuned PostgreSQL query performance and indexing strategies, cutting average API response time by an estimated 20%; managed builds with Maven and version control with Git.

IREL (India) Limited — Enterprise Workflow Application

Java, Apache OFBiz, Hibernate, FreeMarker (FTL), PostgreSQL, XML

- Delivered production-ready workflow and marketing backend modules using Java and Apache OFBiz; wrote optimized SQL queries, joins, views, and indexing strategies for mission-critical internal business operations.

EDUCATION

B.Tech, Computer Science & Engineering — Amity University, Kolkata (2016 – 2020)
