PROFESSIONAL SUMMARY

Java Backend Developer with 4+ years of professional engineering experience specializing in distributed systems, microservices architecture, and scalable RESTful APIs. Expert in Java, Spring Boot, Hibernate, and advanced PostgreSQL query optimization. Strong focus on backend performance tuning, High-Level Design (HLD), Low-Level Design (LLD), and secure application development using JWT and Spring Security. Proven ability to integrate asynchronous event streams via Apache Kafka, manage distributed routing with Spring Cloud Gateway, and optimize enterprise deployments utilizing Docker containerization.

TECHNICAL SKILLS

Core Java & CS:	Java 8/11/17, Multithreading, Concurrency, Data Structures & Algorithms (DSA), System Design (HLD & LLD), Object-Oriented Design
Backend & Microservices:	Spring Boot, Spring Cloud Gateway, Eureka Service Discovery, Spring Security, Hibernate/JPA, REST API Design, Apache Kafka, WebSocket/STOMP
Databases & Caching:	PostgreSQL, Redis, MySQL, Query Optimization, Indexing, Stored Procedures, Database Migrations
Security & DevOps:	JWT Authentication, RBAC, Docker, Docker Compose, Kubernetes, AWS, GitHub Actions, CI/CD
Tools & Testing:	Postman, Swagger/OpenAPI, Maven, Git, SLF4J, Logback

WORK EXPERIENCE

Software Engineer, Java Backend Developer — CMS Computers India Pvt Ltd., Bengaluru

- Architected, developed, and maintained 20+ robust RESTful APIs using Java, Spring Boot, ^{May 2023 – Present} Hibernate, and PostgreSQL to support critical internal enterprise workflows.
- Optimized complex PostgreSQL queries and implemented advanced indexing strategies, successfully reducing average API response time by 20-25% and mitigating production bottlenecks.
- Engineered comprehensive security layers implementing Spring Security Filter Chains, JWT, and Role-Based Access Control (RBAC) to govern access for 100+ internal stakeholders.
- Standardized API validation, global exception handling, and response encapsulation structures across services, reducing production-level defects by an estimated 15-20%.
- Authored exhaustive technical documentation and API specifications for 20+ endpoints using Swagger/OpenAPI, accelerating cross-functional team onboarding.
- Led the containerization of backend services via Docker and Docker Compose, reducing new environment provisioning time by 40%.

Java Backend Engineering — Postgraduate Program — StackRoute (NIIT)

June 2022 – May 2023

- Completed a rigorous, full-time engineering program focused exclusively on Java 8+, Spring Boot, Hibernate, Microservices, and complex database relationships, ensuring seamless transition into a full-time enterprise backend role.
- Designed and deployed multiple robust backend architectures utilizing Spring Boot, JPA, and PostgreSQL to resolve simulated high-traffic enterprise scenarios.

Junior Java Developer — OneIT Custom Business Software, Remote

May 2021 – May 2022

- Built and maintained 10+ scalable backend APIs using Java, Spring Boot, and Hibernate for enterprise application modules.
- Implemented complex business logic and robust validation frameworks following layered architecture paradigms, effectively reducing recurring production bugs by 20%.
- Designed entity-relationship schemas and executed optimized database operations using Hibernate with PostgreSQL across 5+ core modules.

KEY PROJECTS

ADVANN — Distributed Microservices Backend Architecture

Java, Spring Boot, Spring Cloud Gateway, Eureka, Hibernate, PostgreSQL, JWT, Docker

- Architected a production-grade microservices ecosystem spanning 5+ independently deployable services, establishing dynamic routing via Spring Cloud Gateway and Eureka Service Discovery.
- Enforced strict enterprise-grade security leveraging JWT and RBAC via Spring Security Filter Chain, ensuring globally standardized `ApiResponse<T>` structures and centralized exception handling.
- Packaged the entire infrastructure into cohesive Docker containers, facilitating seamless host-to-container database migrations and standardized Maven builds.

DevPulse — Event-Driven Notification Platform

Java 17, Spring Boot 3, PostgreSQL, Redis, Apache Kafka, WebSocket/STOMP, Docker

- Engineered a highly responsive backend system managing real-time data streams utilizing WebSockets and asynchronous event processing via Apache Kafka.
- Integrated Redis for high-speed caching and distributed session management alongside strict JWT security protocols.

EDUCATION

B.Tech, Computer Science & Engineering — Amity University, Kolkata

2016 – 2020
